

Cognizant Security

Design, deploy, manage and automate consistent sets of access control policies across all your enterprise systems.

Access Management services from Cognizant Security

As your digital transformation journey progresses, it will become increasingly difficult to ensure sufficient access to the rapidly expanding applications, software and services deployed across your on-premises, cloud and hybrid environments. With over two decades of experience in providing Access Management solutions for our customers, Cognizant Security is uniquely qualified to provide your organization with a scalable, highly secure and cost-effective Access Management solution.

Our Access Management solutions provide:

- **Authentication:** Leverage numerous form factors and standards for primary and multi-factor authentication (e.g. SAML, OAUTH 2.0, OIDC, FIDO).
- **Authorization:** Deploy coarse and fine-grained (XACML, NGAC) entitlement management, RBAC and other authorization technologies based on your custom requirements.
- **Single sign-on (SSO) and standards-driven federation:** Implement a seamless, web-based user navigation experience that enables SSO functionality across all of your enterprise, partner and SaaS applications using industry-best federated standards (*SAML, OAuth2.0, OpenID Connect and SCIM*).
- **Application Program Interface (API) security:** Leverage your existing IAM investments and/or implement a new API platform solution in order to secure your application resources exposed as APIs (SOAP, REST and microservices).

Cognizant Security's Access Management services are part of a broad portfolio of security solutions designed to help our customers meet their security and compliance challenges.
